Deadline for submissions: February 18, 2007

Web information and content extraction is an emerging field of research demonstrated by the growing number of both research papers published and the tools that facilitate such processes. With current trend for mash-up applications and bringing together content from different sources, the need for robust extraction methods is increasing.

The goal of this workshop is to bring researchers and practitioners together to explore the issues and challenges related to information extraction from the Web. We plan to address not only the current state of the art but also discuss the future.

TOPICS OF THE WORKSHOP

- information extraction from the Web
